The Project is a step-by-step learning environment that closely simulates classroom and lab-based learning into actual implementation. It is an electronic, live juncture on the machine that allows you to

- ✓ Practice step-by-step using a ladder approach.
- ✓ You can build a larger, more robust application and use certain utilities in applications designed by the user.
- ✓ The single program to unified code leads to a complete application.
- ✓ You can learn the implementation of concepts in a phased manner and enhance skills and add value.
- ✓ You can work on real-life projects and give a real-life scenario to help create more complicated and useful applications.
- ✓ Mentoring through email support is also available.

We would like to express our gratitude to our professor, Mr. Le Thanh Nhan, and other students for their invaluable support during our project.

Despite several mistakes we made, we hope to have more opportunities to expand our knowledge in the web development world.

We also appreciate your information and the “demo” project from India APTECH that helped us gain more practical experience in this project. Since we have gained more experience from this project, we will continue learning as much as we can to be more successful in the future.

Best regards,

Team Group 01

# Synopsis

The Objective of this program we aim is to give a sample project to work on real life projects. These applications help us build a larger more robust application.

The objective is not to teach us front-end or back-end technology but to provide us with a real life scenario and help us create basic applications using the knowledge and skills we have learned. This program aims to enhance our problem-solving abilities, critical thinking skills, and collaboration skills. It also aims to give us hands-on experience in developing software applications and understanding the software development lifecycle.

Throughout this program, we will be given various projects that simulate real-life scenarios and challenges. These projects will require us to analyze requirements, design solutions, implement code, test thoroughly, and deploy the application. We will also have the opportunity to work in teams, mimicking the collaborative nature of real-world software development.

By working on these projects, we will gain practical experience in applying our technical knowledge, learning how to work with different tools and technologies, and understanding the importance of effective project management. We will also learn how to communicate effectively with stakeholders, gather and analyze requirements, and deliver high-quality software solutions.

Ultimately, the objective of this program is to prepare us for real-life software development projects by providing a learning environment where we can apply our skills and knowledge to solve practical problems. It aims to bridge the gap between academic learning and industry requirements, making us job-ready professionals in the field of software development.

# **Review 01**

<b>Design Plan:</b> EasyFly	<b>Document Name:</b> Problem Definition	<b>SWD/Form</b> No.01/PD/Ver1.0
<b>Effective Date:</b> 10-07-2023	<b>Version</b> 1.0	<b>Page No:</b> 1 of 42

## Problem Definition

EasyFly is a company that aims to provide an easy and convenient way for users to book flight tickets. However, the company has identified several problems that need to be addressed in order to achieve this goal. One of the main issues is the lack of a user-friendly interface that allows users to easily search for flights and book tickets. Additionally, the company needs to ensure that the booking process is secure and reliable, with no errors or glitches. Finally, EasyFly needs to ensure that its prices are competitive and affordable, in order to attract customers and remain competitive in the market.

Based on the need stated in the Project Overall, we design an application that will provide the key features and functionalities as the followings:

- ✓ Provide function for member register.
- ✓ Provide information of the product to customers and member.
- ✓ Provide function that customers and members can order flight ticket.
- ✓ The member can take their privacy through Member Control Panel (MCP).
- ✓ Receive comments from customers and members to improve service quality as well as product quality.

An Admin Control Panel (ACP) that support about management system:

- ✓ Administrators the ability to add, update product information quickly and accurately.
- ✓ Administrators the ability to manage members and their feedback, comment or rating.

<b>Effective Date:</b> 10-07-2023	<b>Version</b> 1.0	<b>Page No:</b> 2 of 42

- ✓ Administrators the ability to manage delivery progress belong to orders.
- ✓ Administrators the ability report statistics.

The Role of User and Admin:

#### 1. User:

- ✓ Can register as a member and manage personal account.
- ✓ Can give feedback, comment, rate about products.
- ✓ Can view their orders.

#### 2. Administrator:

- ✓ Can add / edit / deactivate products and categories.
- ✓ Can view customer's information or deactivate an account.
- ✓ Can reply the feedback or comment.
- ✓ Can view all orders and approve orders.
- ✓ Can view report statistics.

<b>Design Plan:</b> EasyFly	<b>Document Name:</b> Customer Requirements Specifications	<b>SWD/Form</b> No.02/CRS/Ver1.0
<b>Effective Date:</b> 10-07-2023	<b>Version</b> 1.0	<b>Page No:</b> 3 of 42

## Customer Requirements Specifications

User:

input:

- Member registration information.
- Product's information.
- Order selected products.
- Feedback about products.

process:

- Search products from database by categories, by product types
- Process customer registration information.
- Process product's feedback..
- Process customer orders

output:

- Notification of successful registration / failure.
- Product information.
- Notification of successful making order order.

Webmaster:

input:

- Administrator login information .
- Product and category information to add / edit / delete.
- Member information to be search / delete.
- Order information to be search / approve

process:

- Add / edit / delete products.
- Get information of all members.
- Change member account's status.
- Get all orders
- Update order status.

output:

- Notification to add / edit / delete products success / failure.
- Notification to change member account's status.
- Notification to update order's status.

## Hardware / software requirement

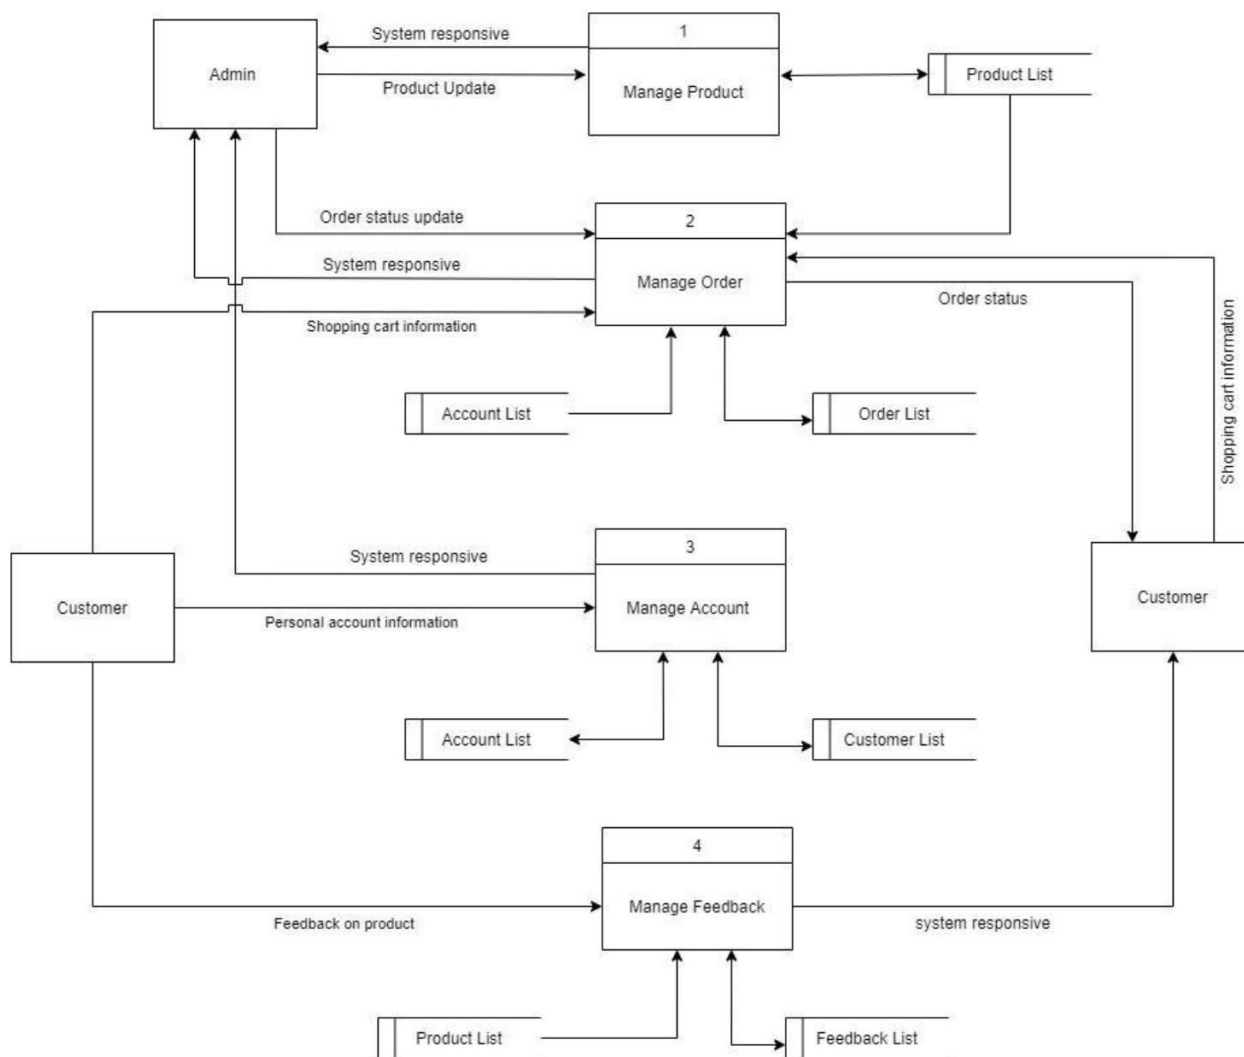

Sr.	Item	Description
1.	Operating system	Windows 7, 8, or higher
2.	Hardware	CPU Cores or better with 2 Gigabytes of RAM or better
3.	Web Browser	Version in later of: Edge, Firefox, Chrome, etc...
4.	Fonts	Standard font Unicode: Arial, Tahoma, Lucida Console, Times New Roman, etc...
5.	Other requirement	NodeJS, Git, XAMPP 7.3 or later   A working internet connection
